

ITECO implements a program to increase the number of gas-engine trucks in own fleet. In the nearest future ITECO plans to increase it to

50%

The main advantages of a 2-fuel power system:

- 25% reducing emissions of CO₂ and other harmful substances
- Reducing smokiness by 3 times
- Increased engine life
- Preservation of all power characteristics of engine
- Improving the economic efficiency of car use

Natural gas is the most environmentally friendly fuel. At the modern technological and technical level it allows radically reducing atmospheric pollution with acid gases. ITECO is actively implementing a project to reduce emissions from trucks operation.

1700 trucks - own fleet
